Fruit Tree Price List

Fall 1919—Spring 1920

ELMWOOD NURSERIES

MIDLOTHIAN, VIRGINIA

J. B. WATKINS & BRO., Proprietors

APPLES

The varieties offered below are some of the best known and proven sorts. Clay or clay loam is the best soil for growing apples. The land should be plowed well and deep before setting the trees. It should, of course, be well drained and kept thoroughly cultivated. Our prices, while higher than before, will be found very reasonable considering the cost of growing them in these times.

Prices of trees, except where noted:

Strong, 2-year, 4 to 6 feet trees, 60c each; \$6.00 dozen.

Strong, 1-year, 2 to 3 feet trees, whips, 40c each; \$4.00 dozen; \$32.00 per 100.

Note.—Those varieties marked one star (*) can only be furnished in 2-year trees; those marked two stars (**) can only be furnished in 1-year trees. Otherwise, unmarked, they can be supplied in both 1-year and 2-year sizes.

STRAWBERRY PLANTS

Any moderately rich soil will produce straw-berries. Thoroughly plow, harrow and put in fine condition; then stretch line three and a half feet apart, and set plants one or two feet apart in rows. Manure may be applied to land, but we prefer some good plant fertilizer, because the manure is apt to contain clover and other grass seeds, which are very objectionable in straw-

rows. Cultivate enough to keep all weeds and grass down. If harrow is run over land soon after rains it will keep land clean of grass, and will turn runners into the row, which form a mat, and will help to prevent grass in rows. In spring land should have a light mulch, which prevents berries from being gritty, and also helps to keep up moisture in dry weather. Planting may be done in fall or spring.
